Subject: Interpretation of USA Swimming Rules and Regulations Article 101.3.2 (Butterfly)

It has come to the attention of the Rules & Regulations Committee that there appears to be a lot of inconsistency in the application of Article 101.3.2 as it relates to the recovery of the arms in the butterfly stroke. In an effort to provide some clarity and consistency, the Rules & Regulations Committee would like to reiterate its interpretation of the proper application of 101.3.2.

Article 101.3.2 requires that, in the butterfly stroke, "both arms" must be brought forward "over the water" and pulled back simultaneously. For purposes of Article 101.3.2, as it relates to the recovery of the arms in the butterfly stroke, it is the interpretation of the USA Swimming Rules & Regulations Committee that the "arm" is that portion of the body which extends from the shoulder to the wrist. It is also the interpretation of the Committee that "over the water" means that the arm, as defined above, must break the surface of the water during the recovery phase of each stroke.

If you have any questions regarding the above, please do not hesitate to contact me.
